## WORK EXPERIENCE

### Front-End Developer

FW Agency (Propeople in past) August 2014 - present

Skills used: JavaScript, HTML, CSS, SASS, Susy, jQuery, AngularJS, Bundler, Gulp, GIT

Role overview: Front-End Developer in an international company that provides web services. The most common tasks included theming web sites of big companies and organisations. Also adding specific behavior using JS and different scripts.

Interesting challenges: Making web sites responsive for all kind of devices: phones, tablets, laptops; and for different versions of browsers. Sometimes there were more sophisticated tasks related to JS, which I do with big passion. I've created an AngularJS application, which communicated through an API by making different HTML requests and browsing through application, without making the window to refresh.

### Front-End Developer

Freelancer 2010 - 2013

Skills used: JavaScript, HTML, CSS

Role overview: Slicing designs for different clients. Sometimes creating CMS themes from designs. That's how I've become Front-End Developer.

Interesting challenges: Different clients with different requests. That was the period when IE6 was still required. Sometimes had to create themes for different CMS.

## EDUCATION

### Technical University of Moldova

BSc. in Computer Science 2011 - 2015

Overview: 4 years of Math, analysis, and Computer Science related studies, in Anglophone Department. A lot of theory and practical laboratories.

Interesting moments: Sometimes we were doing weekend events, kind of hackathon, where students from different years gathered together to code and share some knowledge. Also as Anglophone Department, we had our own office, where students from different years had access, and usually there were so many of us, that we didn't have enough space, therefore we were communicating a lot and doing stuff together.

### Budapest University of Technology and Economics

Erasmus Program 2013 - 2014

Overview: 2 Semesters of Computer Science in Hungarian University. Lots of beneficial theory in classes and life experience outside the lessons.

Interesting moments: I've met a lot of new people from different countries and with different interests, discovered the beauty of Budapest, and some other UE cities (including Amsterdam). Now I have some friends in UE, too.

## LANGUAGES

Romanian	Native
Russian	Native
English	Very good
German	Very basic

## PROFILE

I am a JavaScript Engineer with 3 years of experience, including exposure to HTML, CSS, PHP.

I've done a lot of web front-end development, but I've also worked with back-end, mostly by using Node.js platform. And now I'm looking more into developing the logical part of web applications, by using JavaScript frameworks and/or other languages on server-side.

I'm a proponent of Open Source and starting with exploring the work of others and making small inputs.

## SKILLS

### JavaScript

I love working with JavaScript, and have the understanding of the language as it is. Therefore it comes easier to understand different libraries, frameworks, and platforms based on it. I like the way JavaScript treats almost everything as objects, and its scopes.

### JavaScript Libraries and Web Frameworks

I've worked a lot with jQuery and I understand it well. Also I have worked with different other libraries and it's not a problem at all to start using a new one. I've also worked with AngularJS and intend to go with some other web frameworks, too.

### Slicing (HTML/CSS)

I started slicing when IE6 was still widely used browser. I gradually migrated from simple css to LESS/SASS, live-reload, multiple files, and now I'm using Sass with Susy grid system and Gulp. Same with HTML, started with xHTML and now using HTML5 considering all its standards.

### Server-Side

I have some experience building web applications and web APIs using PHP and Node.js. At the current company we use a lot of Drupal, so I've learned how to create simple modules on it. I have the knowledge needed to built the server-side of an application, but I certainly need the practice and that's what I'm gonna do next.

### Other

I've written a small android application while in university and worked with OpenGL, written C++, Python and Ruby. I'm still in the period of uncertainty and I'm open to new stuff. But I really like activating in Web field.

## EXTRACURRICULAR ACTIVITY

### NGO BEST (best.eu.org)

Active member 2011 - 2014

Overview: BEST, Board of European Students of Technology, is the place where students with different background and life goals meet in order to grow together, cooperate, create some events, make new friends, and have fun.

Interesting moments: I've been Vice-President of NGO BEST-Chisinau for one year, together with other 4 people from board. Also Academics Responsible for the International Summer Course "Discover the wine - explore the taste". While activating, I've improved some of my skills as: team work, management, leadership. Also I've made new friends, which are really nice people.
